

Intelligent Condition Monitoring
& Vessel Efficiency Software

HOW EFFICIENT ARE YOUR ASSETS?

James Fisher Mimic (JFM), providers of intelligent Condition Monitoring & Vessel Efficiency Software will be demonstrating their flagship product, Mimic, which is used globally and provides vessel owners and operators with live

decision making data relating to asset condition and operational efficiency. Data from Mimic can help you optimize your maintenance, improve asset performance and avoid costs associated with off-hire, intrusive breakdown maintenance and insurance claims.

During the Marine Maintenance Expo JFM will also demonstrate other new innovative products and software updates, such as;

- The updated Mimic version 4 Software, which is a new browser-based viewer environment; it includes all the standard Mimic features, along with new modules for Vessel and Asset Performance Efficiency monitoring and Fleet Management.
- The Bluetooth Portable Accelerometer (BluPacc), light and compact, which links in to the new Mimic Data Collector app and reduces entry level data collection by at least 50%.
- Mobile Applications: The Mimic App allows Users to have alert announcements transmitted to their mobile devices anywhere in the world whilst the Mimic Data Collection App transforms a mobile device into a condition monitoring data collector.

In addition, Martin Briddon MBE, Engineering and Business Development Manager of James Fisher Mimic will be presenting on the topic 'Predicting the future while managing the present', on Wednesday 7th June.

Please come along and visit us on stand M3060 where we would be pleased to discuss your challenges and demonstrate our Mimic solutions.
